

COVID-19 virus

causes high fever

and infection in lungs,

which is dangerous

for elderly people

and for those who have illnesses.

You can get the virus by droplet infection

Drops will spread when we talk

cough or

sneeze.

You can get infection from hands

or if you are near to a person who has the virus.

Stop

spreading the virus!

Wash your hands with soap and water.

Dry hands with a paper towel.

Put the paper towel into trash.

Cover your mouth and nose with a tissue

when you cough or

sneeze.

Put the tissue right away into trash.

And remember

to wash your hands!

If you have a sore throat

or you have a flu

stay

at home.

Don't

infect the disease.

Don't

visit people who have illnesses

or elderly people.

Instead of a visit

phone them.

Don't go to

places crowded with people.

Instead of that

keep distance to other people.
